ZUBAYEER ALAM

App Development — Flutter Developer | Mobile App Developer

Dhaka, Bangladesh | 01933480441 | zubayeer5000@gmail.com | github.com/ZubayeerAlam | Portfolio | LinkedIn

PROFESSIONAL SUMMARY

Computer Science and Engineering undergraduate at AIUB and graduate of the Ostad Flutter App Development course (Batch 17). Builds cross-platform mobile apps with Flutter and Dart, using Firebase, REST APIs, Google Maps, and Clean Architecture with Riverpod for state management, and backend web applications in C# with ASP.NET Core MVC, Entity Framework Core, and SQL Server. Has shipped multiple apps covering authentication, relational database design, REST API integration, and cloud data storage, and documents the learning journey publicly through a 100 Days of Code series on LinkedIn. Quick to pick up new tools and frameworks, comfortable working across the full stack from UI to backend and database design, and looking for an opportunity to apply and grow these skills on a real engineering team.

TECHNICAL SKILLS

Mobile: Flutter, Dart, Widgets, Responsive UI, Light/Dark Theming, Navigation, Material Design

State Management: Riverpod, Provider, BLoC

Backend and Data: Firebase (Authentication, Cloud Firestore), REST APIs, JSON, HTTP, SQLite (sqflite), SharedPreferences

Architecture: Clean Architecture, MVVM, Repository Pattern, Dependency Injection, SOLID, Object-Oriented Programming

Tools and Services: Git, GitHub, Google Maps and Places APIs, Android Studio, Xcode, VS Code

Other Languages: C#, ASP.NET Core MVC, Entity Framework Core, SQL Server, PHP, MySQL, Python, C++, HTML, CSS

PROJECTS

Ostad Flutter App Development, Batch 17 (Training) *Completed*

- Learned Dart OOP, async programming, Flutter UI, state management and REST APIs; built apps from each module and shared daily progress in a 100 Days of Code series on LinkedIn.

Gas Station Finder App *Flutter, Google Places API, OSRM, Provider*

github.com/ZubayeerAlam/Ostad-All-Module (module 18)

- Built a map app that reads device location (with permission handling), calls the Google Places REST API for nearby gas stations, and draws driving routes using the OSRM REST API.
- Separated networking into an API service and repositories; a Provider view model handles loading state and failed requests.

Task Manager App *Flutter, REST API, Provider*

github.com/ZubayeerAlam/Ostad-All-Module (module 14)

- Consumed a REST API (sign-up, login, task lists, create, update status, delete) with the http package, JSON parsing and token headers.
- Wrote a reusable API caller with status-code handling, stored the login token in SharedPreferences, and managed sign-in state with Provider.

Cal AI App (Calorie Tracker) *Flutter, go_router, Provider*

github.com/ZubayeerAlam/Calorie-ai-app

- Built a calorie tracker with onboarding, calorie and macro goals, food logging, step counting and a dashboard, using a repository over shared_preferences, go_router, Provider, camera permissions and widget tests.

Smart AIUB Service Issues — .NET Web App *C#, ASP.NET Core MVC, EF Core, SQL Server*

github.com/ZubayeerAlam/Smart-AIUB-Service-Issues-.NET-Web-APP

- Built a role-based campus issue tracker in C# with ASP.NET Core MVC (.NET 10), EF Core and SQL Server: users report problems, admins assign them to support teams, and staff resolve them with a full status history.
- Designed the relational database Code First with 12 entities, Fluent API configuration and migrations: unique indexes, restricted-delete foreign keys, enums stored as text, and a RowVersion concurrency token.
- Put business rules in an interface-based service layer with dependency injection; a workflow service validates every status change. Added pagination, filters and date-range reports with LINQ grouping queries.
- Secured it with ASP.NET Core Identity (4 roles, lockout), resource-based authorization against access to other users' records, and anti-forgery validation. Wrote xUnit tests (SQLite in-memory) for services, workflow and authorization.

Food Menu — .NET Web App *C#, ASP.NET Core MVC, EF Core, SQL Server*

github.com/ZubayeerAlam/Food-Menu-.NET-Web-App

- Built a C# ASP.NET Core MVC and EF Core (SQL Server) menu app that lists dishes with prices and a details page showing each dish's ingredients.
- Modeled a many-to-many Dish–Ingredient relationship (join entity, composite key), created the migration and seeded data; implemented search and price sorting with async LINQ and Include/ThenInclude.

EDUCATION AND TRAINING

B.Sc. in Computer Science and Engineering, American International University-Bangladesh (AIUB)

Expected [Month Year]

Relevant coursework: Advanced Programming (.NET), Web Technologies, Computer Networks, Operating Systems, Compiler Design.

Flutter App Development, Batch 17, Ostad *Completed*

Instructor: Momshad Dinury. Covered Dart OOP, async programming, Flutter UI, state management, APIs, and Firebase.

ADDITIONAL INFORMATION

- Portfolio: zubayeer-alam-portportfolio-web-sit.vercel.app | Languages: English, Bangla.
- 100 Days of Code: publicly documented daily Dart and Flutter learning on LinkedIn, including code cards and project write-ups.
